$S1.beer_2010DataCleaning$ - Process raw beer data

Algorithm name: S1.beer_2010DataCleaning(save_2010_main_data = 'all_formats', out_algoRunTime = T)

Algorithm run time: 33.2137923 minute(s).

${\bf S2.construct_2010}$ market Data - Partition the cleaned data by city

```
Algorithm name: S2.construct_2010marketData(input_fileType = 'feather', marketNames = c('all'), out_algoRunTime = T)

Algorithm run time: 3.2091913 minute(s).
```

$S3.explore_2010marketData$ - Explore the completeness of the data

This algorithm takes city level data and determines, by brand, if there are any weeks over a 52 week period (one year) that a brand is missing in the data. If there are missing weeks in the data it is impossible to tell if there were no sales of a particular brand during that week or if the brand was not offered for sale. All we can see is that the week is missing data. Further, this algorithm determines the completeness of the data at the chain level. The same problem occurs when evaluating missing data at the chain level. It is not possible to say why the data is missing, simply that the data is missing.

The output of the algorithm presents a data file called: $D3.explore_2010marketData.rds$

This files contains information on missingness in the data by city / brand / week / chain.

Several data frames are contained in the list.

- BrandsOnly_CompleteData_wks: contains a list of brands with complete data over all 52 weeks.
- explore_Data_Complete_wks: contains the raw data.frame for the brands with complete data over all 52 weeks.
- Brands_CompleteData_wksANDChains: contains a list of brands with complete data over all 52 weeks and complete data over all chains in the city. The number of chains is variable depending on the city.
- explore_Data_Complete_wksANDChains: contains the raw data.frame for the brands with complete data over all 52 weeks and chains with complete data over all chains.
- explore_Data: contains the complete raw data.frame used to obtain the above filtered results.

Algorithm name: S3.explore_2010marketData(out_algoRunTime = T)

Algorithm run time: 3.0931297 minute(s).

$S4.allBrands_2010$ analysis -

```
Algorithm name: S4.allBrands_2010analysis(brands= c("CHICAGO", "DALLAS, TX", "LOS ANGELES", "SPOKANE", "SYRACUSE", "HOUSTON"), out_algoRunTime = T )
```

Algorithm run time: 0.0076146 minute(s).

 $S5.aggregate_allBrands_2010$ -

City Data:

CHICAGO
